HERMES SOC // THREAT INTELLIGENCE UNIT

Daily SOC Threat Intelligence Report

Perimeter & Endpoint Telemetry — Catch-up re-run for window **Oct 3 2026 14:00 → Oct 4 2026 02:00 CEST** (12:00–00:00 UTC)

Classification	**CONFIDENTIAL**
Target perimeter	`82.67.102.78` — [redacted] (OPNsense), weirdchaos.net · DMZ/SLAN public services behind srv-edge-01 BunkerWeb WAF
Sources	Wazuh SIEM (rule level ≥ 7), pfSense/OPNsense filter logs, BunkerWeb WAF, Sysmon, OpenCTI integration, network inventory `homelab_inventory.yaml`
Assessment verdict	**ELEVATED — CONTAINED.** No successful compromise detected. 16 hostile external sources engaged the perimeter; all inbound probes were dropped at [redacted] or 403-blocked by the WAF. One endpoint (WKSTN-WIN-01 [redacted]) shows an unresolved OpenCTI SHA256 indicator match plus a Sysmon telemetry black-hole requiring follow-up. Highest L15 alert forensic-resolved to a benign PowerShell self-test.
Report generated	2026-10-04 09:50 CEST (catch-up execution 09:40 CEST)

1 · EXECUTIVE KPI DASHBOARD

631
LEVEL ≥ 7 ALERTS (12 H)
L15×18 · L12×217 · L10–11×80 · L7–9×316 · 595 endpoint/WAF · 28 inbound-blocked (22 hostile + 6 orphan-replies) · 7 egress · 1 inter-VLAN

3
UNIQUE HOSTILE IPS PROFILED
+4 benign CDN orphan-replies excluded · 7 egress destinations feed-blocked

L15
HIGHEST RULE: 92213 EXE-DROP
Forensically resolved: PSScriptPolicyTest FP (×18, 2 hosts)

4
IMMEDIATE CONTAINMENT ACTIONS
16 edge block entries (15 × /32 incl. Censys-excluded set + 1 × /24 Contabo aggregate) · WAF ACLs ×3 · endpoint/SIEM remediations

MITRE ATT&CK tactic distribution (alert-weighted): Defense Evasion **×144** · Privilege Escalation **×133** · Command and Control **×108** · Impact **×98** · Execution **×77** · Credential Access **×36** · Reconnaissance **×21** · Persistence **×20**

Intent: same Contabo /24 as .206

Containment: covered by /24 block

173.249.33.72 low-med

ASN AS51167 | CONTABO GmbH | 🌍 DE (usage FR) | PTR m11372.contaboserver.net | FireHOL listed: no

First seen — CEST · **type:** UDP probe / QUIC-replies?

AbuseIPDB: **71/100** (744 reports)

Observed: 4 UDP pkts sport 7222,11989,35112 -> WAN:4433,30829,16603 blocked

Target: [redacted] WAN

Intent: Contabo abuse cluster; sport 11989 may include orphan replies — ports 30829/4433/16603 closed on WAN

Containment: edge drop host; part of Contabo range

`173.249.4.73` **Unresolved**

ASN AS51167 | CONTABO GmbH | 🌍 DE | PTR m24423.contaboserver.net | FireHOL listed: no

First seen — CEST · **type:** UDP probe

AbuseIPDB: **Unresolved (rate-limited)**

Observed: UDP :60171 -> 82.67.102.78:16603 blocked

Target: [redacted] WAN

Intent: third distinct host probing UDP:16603 in 15 min window

Containment: edge drop host

EXCLUDED — benign orphaned replies (not adversaries): `3.175.85.225` `3.175.7.139` `3.164.161.13` (AWS CloudFront, sport 443 — stateless-deny replies to our own QUIC/HTTPS egress) · `213.36.131.8` (OVH/Proxad, SYN-ACK reply). Also attributed-research: `199.45.155.30` = **Censys scanner** (PTR censys-scanner.com) probing POP3S 995 — internet-wide survey, optional rate-limit, no ban.

Egress feed denials (policy worked): Unmapped WLAN client 10.0.X.X [redacted] ×5 outbound blocks incl. `193.46.206.87:443` (known-abuse hosting range); mobile-client-01 [redacted] → Google 172.217.22.163; WKSTN-LNX-01 [redacted] → CloudFront 52.84.151.27. **Action: fingerprint & identify** 10.0.X.X [redacted] — repeated feed hits suggest a blocklist-adware/infostealer-capable device on WLAN.

5 · ENDPOINT DEEP-DIVE — WKSTN-WIN-01 & FLEET

PRIORITY-1 follow-up (unresolved): OpenCTI integration (rule 100210 ×10) matched a **SHA256 threat indicator** `8dd1ebb0b969370c70a5ee7f7ee347949aa7046aa5e1a33fcd7b1e9415b21fc3` (max_score 50) against an event on WKSTN-WIN-01 (10.0.X.X) at 15:22 CEST. ThreatFox/abuse.ch returned **clean** for the hash (stale/custom OpenCTI indicator suspected), but full event context could not be restored within the indexer rate budget → **manual pivot required**: Wazuh → rule 100210 → agent WKSTN-WIN-01 → 15:20–15:25 CEST, inspect the observable filename/hash chain.

Concurrent L12/15 storm on the same host 14:50–16:00 CEST is forensically EXPLAINED as software-install + FP noise (Sysmon image paths verified individually):

- `92213 L15 ×18` / `92205 L9 ×84` — PowerShell writing `__PSScriptPolicyTest_*.ps1` (%TEMP% / C:\Windows\SystemTemp) — canonical PS 5.1 script-policy self-test, **benign**.
- `92151 L12 ×77` — `mscorsvw.exe` (NGen) loading signed System.Management.Automation — **benign**; 1 *unsigned* variant flagged for verification.
- `92910 L12 ×106` — OneDrive.exe → explorer process access (T1036) — **classic FP**.
- `92206 L12 ×10` — spoolsv.exe dropping `PrintConfig.dll / mxdwdrv.dll / UNIRES.DLL` under spool\drivers*New* — normal MS/Konica print-driver package install; **confirm install was user-initiated** (rule targets PrintNightmare T1574.010).
- `92207 L12 ×5` — msiexec/EdgeUpdate creating Public\Desktop shortcuts (Edge, Synergy, DesignSpark 6.1) — install window corroborates.
- `61643 L10 ×5` + `203 L9 ×3` — **telemetry black-hole:** Sysmon driver queue overflow dropped up to **12,496 RegistryEvents + FileCreate events**; Wazuh agent buffer hit 100% (events lost 14:56 & 15:33 CEST). During the very period of the installer storm — a detection gap, not an attack; enlarge queue/buffer.

Other endpoint items: rootcheck 510 (L7 ×92) = generic 'Trojaned' signature FPs on shell-wrapped coreutils across srv-ai-01 /srv-mon-02 /srv-dns-02 /srv-sec-01 — tune skip list. `531` ×3: WCN-LI gw-alpha -WORKSTATION snapd loopback partition at 100% (disk hygiene). `60227` ×1: USB re-enumeration on WKSTN-LAP-02 — documented normal per inventory. VM-LNX-02 VM (10.0.X.X) generated no level≥7 activity this window.

6 · CONTAINMENT & FIREWALL ACTION PLAN

6.1 Immediate IP blocklist (copy-paste)

OPNsense: Unified Access / Aliases → add table `SOC_HOSTILE_20261004` (Geo: none — custom) with the 15 entries below; firewall rule on WAN: source `SOC_HOSTILE_20261004` → block (drop, log). **Two entries are /24 aggregates covering confirmed multi-host clusters:** 207.180.192.0/24 (Contabo hosts .205+.206, inside announced 207.180.192.0/19) and 57.129.105.0/24 (OVH, announced /24) — safe scopes per RDAP.

```
104.208.73.227
20.204.16.113
20.28.180.172
207.180.192.0/24    # CONTABO (covers .205/.206 UDP sweep cluster)

# optional: 57.129.105.0/24 (OVH abuse-score-100 host, announced /24)
```

iptables / edge script form:

```
iptables -I WAN_BLOCK -s 104.208.73.227/32 -j DROP  # Microsoft Corporation (Azure)
iptables -I WAN_BLOCK -s 20.204.16.113/32 -j DROP  # Microsoft Corporation (Azure)
iptables -I WAN_BLOCK -s 20.28.180.172/32 -j DROP  # Microsoft Corporation (Azure)
```

NOT blocked: `199.45.155.30` (Censys — attributed research; rate-limit via WAF only if repeated) · CloudFront `3.175.85.225 / 3.175.7.139 / 3.164.161.13 / 213.36.131.8` (orphaned replies, benign) · Azure AS8075 /24s NOT aggregated (shared infra, scanner IPs rotate; block hosts + rely on WAF ACL).

6.2 WAF / Fail2ban (srv-edge-01 BunkerWeb)

```
# BunkerWeb persistent deny for the Azure backdoor-hunter cluster:
bunkerweb_set_value MULTIWAF_IP_DENY "104.208.73.227"
bunkerweb_set_value MULTIWAF_IP_DENY "20.204.16.113"
bunkerweb_set_value MULTIWAF_IP_DENY "20.28.180.172"
# or Fail2ban jail (already effective via 403 auto-ban): 3× 31151 bursts per host → denykey
bunkerweb reload
```

Verify no historical 200s for the probed URIs (`/0x.php /wmore1.php /media.php /dev.php?p= /BtOCXH4W1V5.php` …) across all vhosts over the last 30 d — these scanners hunt *pre-existing* webshells. No 200s in this window; WAF posture correct.

6.3 Endpoint & SIEM remediation checklist

- ☐ WKSTN-WIN-01 — pivot rule 100210 SHA256 `8dd1ebb0…21fc3` : locate the observable file, hash & parent chain; if unknown → isolate + full AV scan. ☐ Confirm Edge/Synergy/DesignSpark installs were user-initiated.
- ☐ WKSTN-WIN-01 **telemetry** — raise Sysmon driver queue & Wazuh agent `events_per_sec/max_buffers` (12,496 events dropped today).
- ☐ 10.0.X.X **(Unmapped WLAN)** — DHCP lease/ARP/switch-port fingerprint; repeated egress feed hits toward known-abuse netblocks.
- ☐ WKSTN-LNX-01 — purge snapd loopback partitions (100% full).
- ☐ **Tuning** — suppress PSScriptPolicyTest (92205/92151/92213 for `mscorsvw|SystemTemp|__PSScriptPolicyTest`), OneDrive 92910 exception, rootcheck 510 skip `/usr/bin/(md5sum|date|uname|mail)` wrappers; keep L15 path-exception alerting.
- ☐ srv-mail-01 **(mail)** — no L7 inbound mail brute-force this window; port 995 hit was Censys research. No action.
- ☐ Confirm print-driver install 13:52 UTC (spoolsv drops) against change record; else hunt T1574.010.

6.4 Proactive hunt queries

```
Wazuh console → rule.level:[7 TO 15] AND srcip:"{any.ext}" | next 24h watch for repeats of today's set
Indexer:  q='rule.id:87702 AND dstip:"82.67.102.78"' terms agg srcip — baseline 3 hostile IPs / 12h
OpenCTI:   investigate indicator {sha256:8dd1ebb0b969370c70a5ee7f7ee347949aa7046aa5e1a33fcd7b1e9415b21fc3} provenance
WAF hist:  * | where uri in ('/0x.php','/wmore1.php','/media.php','/dev.php','/dot.php','/faze.php') and status != 403
```

End of report — Hermes SOC/CTI · window 2026-10-03T12:00:00Z→2026-10-04T00:00:00Z · 631 level≥7 alerts · generated 2026-10-04 07:50 UTC. Enrichment: contrastapi PRO (AbuseIPDB/InternetDB/FireHOL), RDAP, abuse.ch ThreatFox. mcp__osint__whois_ip not used (known-broken).
